Art Unit: 2625

DETAILED ACTION

Information Disclosure Statement

- 1. The information disclosure statement (IDS) submitted on January 8, 2002 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.
- 2. The information disclosure statement (IDS) submitted on April 1, 2002 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Specification

- 3. The abstract of the disclosure is objected to because it contains 2 paragraphs and should be only one paragraph. And contains more than 150 words. Correction is required. See MPEP § 608.01(b).
- 4. Specification refers to claim numbers in page 3, lines 8-13. The examiner suggests that it is not a customary US practice to refer to claim numbers in specification.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 2625

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

6. Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hugosson et al. (US 2002/0000981) in view of Krasuski et al. (US 2001/0032033).

As to claim 1, Hugosson et al disclose a method for remote addressing of an item of mail (page 1, paragraph 0008, wherein the product provides an address area indicating an address to which the handwritten information is to be sent), comprising obtaining remotely produced address information (page 4, paragraph 0055 wherein a pen which scans the address area is connected by a network via cables in this case the network is the public telephone network), the address information comprising a digitally represented graph of a handwritten address (as disclosed in instant application specification and considering claim 2, wherein graph comprises obtaining a sequence of coordinates representing graph. Fig.6 and page 5, paragraph 0061 of Hugosson et al teach this limitation, particularly wherein 5 sequence values of SX1 - SX5 and SY1 - SY5 which define the position of different subsequences 67 in the sequence). by sending said graph to a device (page 5, paragraph 0066 and fig.8, wherein receiver 44).

However, Hugosson et al does not expressly disclose that the graph is applied to the item of mail.

Krasuski et al (US 2001/0032033) disclose a system for preparing mail items comprising a printer for printing all the necessary information on the envelope, in particular the destination address and the of the postage or "postage imprint",

Art Unit: 2625

corresponding to the applying a graph to the mail item in claim 1 (page 1, paragraph 0006).

Krasuski et al and Hugosson et al are combinable because they both are from similar problem solving area of automating a process for preparing an item (newspaper, advertisement, magazine, envelope, etc) for sending to a destination address.

At the time of the invention, it would have been obvious to a person of ordinary skill in the art to modify Hugosson et al with the printing address information on an envelope in a full automatic way as disclosed by Krasuski et al (page 1, paragraph 0006).

The motivation/suggestion for doing so would have been to offer a system that is completely self-contained and that prepares mail item fully, ready for posting (page 1, paragraph 0001 of Krasuski et al).

Therefore, it would have been obvious to combine Krasuski et al with Hugosson et al to obtain the invention as specified in claim 1.

As to claim 2, Hugosson et al disclose obtaining the address information comprises obtaining a sequence of coordinates representing the graph of the handwritten address (Fig.6 and page 5, paragraph 0061 of Hugosson et al teach this limitation, particularly wherein 5 sequence value of SX1 - SX5 and SY1 - SY5 which define the position of different subsequences 67 in the sequence).

Art Unit: 2625

As to claim 3, Hugosson et al disclose address information is obtained via at least one wireless interface from a Mobile communication unit (page 4, paragraph 0055 wherein a mobile unit and a mobile communication system is disclosed).

As to claim 4, Hugosson et al disclose address information is obtained from a digitizing pen (page2, paragraph 0025, fig.2).

As to claim 5, Hugosson et al disclose digitally represented graph of a handwritten address is obtained by decoding a position-coding pattern arranged on a product (page 2, paragraph 0031, wherein the position coding pattern on different products is disclosed, page 2, 0027, and page 3, paragraph 0038 wherein in case of position coding pattern decoding the positions to which they are decoded will be associated with each other).

As to claim 6, Krasuski et al disclose applying of the address information to the item of mail comprises causing a printer to print out the address information on an address label, envelope, etc (page-1, 0006).

As to claim 7, Hugosson et al disclose a computer program stored on a program medium comprising program instructions for implementing a method as claimed in claim 1 or 2 (page 3, 0050).

Art Unit: 2625

As to claim 8, all the limitations of this claim are addressed in claim 1 and as to a device versus a method, Hugosson et al disclose a device and method for communication and Krasuski et al disclose a system for preparing mail item (see the title of the inventions).

As to claims 9 - 13, theses claims respectively are addressed by claims 2 - 6.

As to claim 14, Hugosson et al disclose a storage medium containing software comprising program instructions for implementation of a method as claimed in claim I or 2 (page 3, paragraph 0050 wherein a computer program can be stored in the memory medium and can be used for inputting handwritten information and transmitting the information).

As to claim 15, Hugosson et al disclose a computer programmed to carry out a method as claimed in claim 1 or 2 (page 3, paragraph 0050).

Conclusion

7. This action is non-final.

CONTACT INFORAMTION

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Barry Choobin whose telephone number is 703-306-5787. The examiner can normally be reached on M-F 7:30 AM to 18:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bhavesh Mehta can be reached on 703-308-5246. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
